Goal for Today

By end of today, you should understand:

- How Salesforce platform works internally
- What is an App, Object, Tab
- How developers extend Salesforce
- Basic development architecture (no coding yet)

□ Trailhead Modules (COMPLETE TODAY)

Follow this order:

---

1. Agentforce 360 Platform Basics (~45 min)

□ You will learn:

- Platform overview
- Navigation
- Apps and objects
- How Salesforce is structured

---

2. Agentforce 360 Platform Development Basics (~55 min)

□ You will learn:

- How development happens in Salesforce
- Difference between configuration vs coding
- Overview of Apex, APIs, UI

---

3. (Optional if time permits)

Get Started with Salesforce Development (Project)

□ Only start, don’t stress if not completed fully

□ Videos (Watch ONLY these)

1. Salesforce Platform Explained (Apps, Objects, Tabs)

https://www.youtube.com/watch?v=1n7sR6g3s7Y

Focus:

- What is an App
- What is an Object
- How UI is structured

---

2. Salesforce Architecture Explained

https://www.youtube.com/watch?v=Y2b9c7tRz6Q

Focus:

- Multi-tenant architecture
- Why Salesforce is different
- How platform works

---

3. Developer vs Admin in Salesforce

https://www.youtube.com/watch?v=Qv6sV0l0s2E

Focus:

- When to use clicks
- When to use code

□ CORE TASKS (VERY IMPORTANT)

Task 1: Connect Day 1 + Day 2

Explain:

 How CRM concepts (Account, Contact, Opportunity)
fit into Salesforce Platform (Objects, Apps)

Task 2: Platform Understanding

Answer:

- What is an App in Salesforce?
- What is an Object?
- What is a Tab?

Task 3: Thinking Task (VERY IMPORTANT)

 When should we use:

- Configuration (no code)
- Coding (Apex)

Give 2 examples each

Task 4: Real System Thinking

Take your Day 1 system (college/hospital/etc.)

Now answer:

- What will be your App name?
- What objects will be inside it?
- How will users interact with it?

GitHub Submission

Create:

/day2-platform-basics/

README.md must include:

---

1. What is Salesforce Platform?

---

2. Explain:

- App
- Object
- Tab

---

3. Difference:

Configuration vs Coding

---

4. Your System Design:

(App + Objects + User interaction)

---

5. Screenshots from Trailhead

✍ Questions (For Evaluation / Google Form)

1. What is an App in Salesforce?
2. What is an Object?
3. Difference between App and Object
4. What is multi-tenant architecture? (basic understanding)
5. When should we use configuration instead of code?
6. How does Salesforce allow developers to extend functionality?

Rules

- Do NOT rush into coding
- Do NOT skip explanations
- Focus on understanding platform deeply
- Spend ~2–3 hours

□ End of Day Outcome

You should be able to explain:

- How Salesforce platform is structured
- How CRM fits into platform
- How developers build on Salesforce
