🗓 Salesforce Summer Program – Day 4

🎯 Goal for Today

By end of today, you should understand:

- What is Flow Builder
- Why businesses automate processes
- Types of Flows in Salesforce
- Difference between manual work and automation
- How Salesforce automates business workflows without coding

📚 Trailhead Modules (COMPLETE TODAY)

Follow this order strictly:

1️⃣ Flow Builder Basics (~40 mins)

Focus on:

- What is Flow Builder
- Why automation matters
- Flow types
- Business workflows

2️⃣ Data and Actions in Flows (~1 hr 40 mins)

Focus on:

- Working with records
- Updating data automatically
- Decisions and conditions
- Flow logic

3️⃣ OPTIONAL (Only if time permits)

Create a Screen Flow That Checks for Duplicates

□ Start only if comfortable.

□ Videos (Verified Working Links)

1 □ Salesforce Flow Builder Tutorial (Beginner Intro)

https://www.youtube.com/watch?v=mR-D7RBkRcI

Focus:

- What Flow Builder is
- Playground setup
- Basic automation understanding

---

2 □ Salesforce Record-Triggered Flows Explained

https://www.youtube.com/watch?v=FhMgeoolp1E

Focus:

- What is Record Triggered Flow
- When flows execute
- Real-world examples

---

3 □ Automation in Salesforce | Quick Start

https://www.youtube.com/watch?v=-Lc_5XzYkXw

Focus:

- Why automation matters
- Different automation types
- Business process improvement

---

4 □ Salesforce Flows - Introduction for Beginners

https://www.youtube.com/watch?v=aOG4R36EZWI

Focus:

- Basic flow types
- Visual overview of Flow Builder
- Beginner understanding

□ CORE TASKS (MANDATORY)

Task 1 □ → Automation Thinking

Take your College Management System.

Suggest 5 processes that can be automated.

Examples:

- Auto email after registration
- Auto update remaining seats
- Notify faculty when course is full
- Generate student ID automatically
- Send reminder before fee deadline

Explain:
□ Why automation helps

Task 2 □ → Flow Design Thinking

Choose ONE automation process.

Draw:

- Trigger
- Steps
- Decision points
- Final action

(Simple diagram is enough)

Task 3 □ → Manual vs Automated Process

Choose one real-life process.

Explain:

- How it works manually
- Problems in manual process
- How Salesforce automation improves it

Task 4 □ → Reflection Task (MOST IMPORTANT)

Answer:

□ Why should companies automate repetitive business processes?

□ GitHub Submission

Create:

/day4-flow-builder/

README.md must include:

---

1. What is Flow Builder?

---

2. Types of Flows

Explain:

- Screen Flow
- Record Triggered Flow

---

3. Your Automation Ideas

(5 examples)

---

4. Your Flow Diagram

(Image / draw.io / PPT)

---

5. Manual vs Automated Process

---

6. Reflection

Why automation matters in enterprise systems

✍ □ Reflective Questions

1. Why do companies automate workflows?
2. What problems happen with manual processes?
3. Difference between Screen Flow and Record Triggered Flow?
4. Why is no-code automation powerful?
5. When should automation be avoided?
6. How does automation improve consistency and productivity?

□ □ Rules

- Think like a business analyst
- Focus on process improvement
- Use real-world examples
- Do NOT blindly copy diagrams
- Spend around 3 hours maximum

□ End of Day Outcome

You should now clearly understand:

- How Salesforce automates workflows
- Why business process automation matters

- Types of Flows
- Difference between manual and automated systems
- How no-code automation works in enterprise software
