Set Up Your Salesforce DX Environment ▾

Set Up Your Salesforce DX Environment

Introduction

The Salesforce Developer Experience (DX) is a set of tools that streamlines the entire development life cycle. It improves team development and collaboration, facilitates automated testing and continuous integration, and makes the release cycle more efficient and agile.

This Salesforce DX quick start begins with source code living in your version control system (VCS). It doesn't matter which VCS you use, only that you use one. In this quick start, we assume you're using Git and GitHub, as this is where we've stored the [sample application \(https://github.com/trailheadapps/dreamhouse-lwc\)](https://github.com/trailheadapps/dreamhouse-lwc), called the DreamHouse app.

What Is a Scratch Org?

Much of the setup you do for Salesforce DX enables you to use a new type of org called a **scratch org**. A scratch org is a dedicated, configurable, and short-term Salesforce environment that you can quickly spin up when starting a new project, a new feature branch, or a feature test.

What Is a Developer Hub Org?

A **Developer Hub** (Dev Hub) is the main Salesforce org that you and your team use to create and manage your scratch orgs.

Follow Along with Trail Together

Want to follow along with an expert as you work through this step? Take a look at this video, part of the Trail Together series.

[Quick Start: Salesforce DX \(/content/learn/projects/quick-start-salesforce-dx?trailmix_creator_id=srebello7&trailmix_slug=salesforce-platform-developer\)](/content/learn/projects/quick-start-salesforce-dx?trailmix_creator_id=srebello7&trailmix_slug=salesforce-platform-developer)

Set Up Your Salesforce DX Environment

Enable Dev Hub in Your Trailhead Playground

While you can enable Dev Hub in any paid org, it's always best to practice somewhere other than production. Instead, go ahead and [enable Dev Hub \(https://developer.salesforce.com/docs/atlas.en-us.sfdx_dev.meta/sfdx_dev/sfdx_setup_enable_devhub.htm\)](https://developer.salesforce.com/docs/atlas.en-us.sfdx_dev.meta/sfdx_dev/sfdx_setup_enable_devhub.htm) in a Developer Edition org or Trailhead Playground to use with this project.

Get Your Trailhead Username and Password

You need your Dev Hub login credentials for this project. If you don't already know the username and password for the Developer Edition or Trailhead Playground org where you enabled Dev Hub, follow the steps in [this article \(https://trailhead.salesforce.com/help?article=Find-the-username-and-password-for-your-Trailhead-Playground\)](https://trailhead.salesforce.com/help?article=Find-the-username-and-password-for-your-Trailhead-Playground).

Install the Command Line Interface (CLI)

Use the Salesforce CLI to control the full application life cycle of your Salesforce apps. With it you can easily create environments for development and testing, synchronize source code between your orgs and VCS, and execute tests.

See the [Salesforce CLI Setup Guide \(https://developer.salesforce.com/docs/atlas.en-us.sfdx_setup.meta/sfdx_setup\)](https://developer.salesforce.com/docs/atlas.en-us.sfdx_setup.meta/sfdx_setup) for complete installation instructions.

1. Install the CLI from [Salesforce CLI \(https://developer.salesforce.com/tools/salesforcecli\)](https://developer.salesforce.com/tools/salesforcecli).
2. Confirm the CLI is properly installed and on the latest version by running the following command from the command line.

```
sf update
```

copy

Log In to the Dev Hub

Let's log in to your Dev Hub enabled org.

1. Create an alias **DevHub** by using **-a** and make this the default org using **-d**. To authorize the Dev Hub, in the command window enter the web login flow. The following command opens the Salesforce login page in the web browser:

```
1 | sf org login web -d -a DevHub
```

Allow Access?

Set Up Your Salesforce DX Environment

Salesforce CLI is asking to:

- Access your basic information
- Provide access to your data via the Web
- Access and manage your data
- Perform requests on your behalf at any time

Do you want to allow access for (redacted)?

(redacted).com? (Not you?)

To revoke access at any time, go to your personal settings.

4. After you authenticate in the browser, the CLI remembers your Dev Hub credentials. You see something like this in the Terminal:

```
1 | Successfully authorized rraodv@salesforcedx1.com with org id 00D1I000000n3H5UAI
```

Now you can close the Dev Hub org web page and continue to work. Typically, you start your development work by creating a scratch org that's part of this Dev Hub and use the scratch org for your Salesforce DX projects—we do this in a subsequent step.

But up next, we set up a project on our local machine to test out the next step in developing with Salesforce DX.

If you are working with a Developer Edition org then connect your new Developer Edition org to Trailhead.

1. Make sure you're logged in to your Trailhead account.
2. In the Challenge section at the bottom of this page, click the org name and then click **Connect Org**.
3. On the login screen, enter the username and password for the Developer Edition you just set up.
4. On the Allow Access? screen, click **Allow**.
5. On the Want to connect this org for hands-on challenges? screen, click **Yes! Save it**. You are redirected back to the challenge page and ready to use your new Developer Edition to earn this badge.

Click **Verify Step** to confirm your hands-on org has authorized Salesforce CLI.

You'll be completing this project in your own hands-on org. Click **Launch** to get started, or click the name of your org to choose a different one.

Choose hands-on org
