

☐ Salesforce Summer Program – Day 8 (4–5 Hours)

☐ Goal for Today

By end of today, you should understand:

- What are Lightning Web Components (LWC)
 - Why Salesforce uses component-based UI
 - Frontend vs Backend thinking
 - Reusable UI architecture
 - Basic modern Salesforce UI development
-

☐ Deep Learning Modules (IMPORTANT)

1 ☐ Lightning Web Components Basics

Focus:

- What is LWC
 - Component structure
 - HTML + JavaScript + Metadata
 - Reusable UI
-

2 ☐ Lightning Web Components for Aura Developers (Overview)

Focus:

- Why Salesforce moved toward LWC
- Modern UI architecture

☐ High-level understanding is enough.

☐ Light Completion Modules

3 ☐ Secure Server-Side Development

Focus:

- Why security matters
 - Access control basics
 - Safe coding awareness
-

4 Search Solution Basics (if pending)

Videos (Verified Working Links)

1 LWC Introduction for Beginners

<https://www.youtube.com/watch?v=IHezETiVWPo>

Focus:

- What is LWC
 - Component structure
 - Modern Salesforce UI
-

2 Lightning Web Components Crash Course

<https://www.youtube.com/watch?v=U5qqsetTiLw>

Focus:

- HTML + JS + Meta XML
 - Component lifecycle
 - Real examples
-

3 Salesforce Security Basics

<https://www.youtube.com/watch?v=8g7v6N8q4mE>

Focus:

- Profiles and permissions
- Enterprise security basics

- Access control

☐ **CORE TASKS (MANDATORY)**

Task 1 ☐ **UI Thinking Exercise**

Take your College Management System.

Suggest:

- 5 UI screens/components needed

Examples:

- Student registration form
- Course dashboard
- Attendance view
- Faculty panel
- Notifications widget

Task 2 ☐ **Component Thinking**

Choose ONE screen.

Break it into reusable components.

Example:

Student Dashboard:

- Header component
- Student info component
- Attendance component
- Notification component

☐ Explain why reusable components are useful.

Task 3 ☐ **Frontend vs Backend Thinking**

Explain:

Which logic belongs in:

- UI/frontend
- backend/Apex

Examples:

- Button click
 - Data validation
 - Fee calculation
 - Notification display
-

Task 4 Reflection Task

Answer:

- ☐ Why do modern enterprise systems use component-based UI architecture?
-

☐ GitHub Submission

Create:

/day8-lwc-basics/

README.md must include:

- What is LWC?
 - Why Salesforce Uses LWC
 - Your UI Screens
 - Component Breakdown
 - Frontend vs Backend Logic
 - Reflection
-

☐ Revision Questions

1. What is a component?
2. Why are reusable components useful?
3. Difference between frontend and backend?
4. Why did Salesforce move toward LWC?
5. Why is UI important in enterprise systems?
6. Why should systems separate UI and business logic?
7. What security risks exist in enterprise applications?
8. Why should developers think modularly?

☐ **End of Day Outcome**

You should now clearly understand:

- ☐ What LWC is
 - ☐ Modern Salesforce UI architecture
 - ☐ Component-based thinking
 - ☐ Frontend vs backend separation
 - ☐ Why reusable UI matters
-
