

☐ Salesforce Summer Program – Day 12 (4–5 Hours)

☐ Goal for Today

Today's focus is:

“Professional Salesforce Developer Workflow”

Until now you learned:

- applications
- automation
- UI
- backend logic

Now learn:

- ☐ how real Salesforce teams develop collaboratively.
-

☐ Deep Learning Modules (IMPORTANT)

1 ☐ Quick Start: Salesforce DX

Focus:

- Source-driven development
 - Modern Salesforce workflow
 - GitHub integration
-

2 ☐ Command-Line Interface

Focus:

- Salesforce CLI
 - Developer productivity
 - Terminal workflow
-

☐ Light Completion Modules

3 ☐ Org Development Model

Focus:

- Sandbox vs production thinking
 - Team development workflow
-

4 ☐ Agentforce DX (Overview)

Focus:

- Modern AI-enabled developer tooling

☐ Exposure only.

☐ Videos (Verified Working Links)

1 ☐ Salesforce DX Introduction

<https://www.youtube.com/watch?v=HV9fZei0-xs>

Focus:

- Modern Salesforce workflow
 - DX concepts
 - Source-driven development
-

2 ☐ Salesforce CLI Tutorial

<https://www.youtube.com/watch?v=woINcxIT4ng>

Focus:

- Command-line workflow
 - Developer productivity
-

3 GitHub + Salesforce Workflow

<https://www.youtube.com/watch?v=5xW0j9p8R90>

Focus:

- Version control
 - Team workflow
 - Collaborative development
-

CORE TASKS (MANDATORY)

Task 1 Developer Workflow Thinking

Explain:

Why do professional developers use:

- GitHub
 - CLI
 - DX
- instead of only browser clicks?
-

Task 2 Team Collaboration Thinking

Suppose:

10 developers work on same Salesforce project.

What problems might happen without:

- version control
 - branches
 - deployment workflow?
-

Task 3 Real Engineering Thinking

Compare:

- college coding assignments
- vs
- enterprise software development

Think about:

- testing
 - collaboration
 - deployment
 - rollback
 - reliability
-

Task 4 Reflection Task

Answer:

☐ What did you realize about professional software engineering after learning Salesforce workflow?

☐ GitHub Submission

Create:

/day12-dx-workflow/

README.md must include:

- What is Salesforce DX?
 - Why CLI matters
 - Why GitHub matters
 - Team collaboration problems
 - Enterprise workflow discussion
 - Reflection
-

☐ Revision Questions

1. Why do enterprise teams use version control?
2. Why is deployment workflow important?
3. What problems happen without collaboration tools?
4. Why is Salesforce DX important?
5. Why do developers prefer CLI tools?
6. Why do enterprise systems require rollback capability?
7. Why should teams separate development and production?
8. Why is source-driven development useful?
9. Why is collaboration difficult in large projects?

10. Why is engineering workflow important?

☐ **End of Day Outcome**

You should now clearly understand:

- ☐ Professional Salesforce development workflow
 - ☐ Importance of DX + CLI
 - ☐ Team collaboration challenges
 - ☐ GitHub-based enterprise workflow
 - ☐ Real-world software engineering practices
-
