

☐ Salesforce Administrator Track – Day 4 (5–6 Hours)

Theme

Security & Sharing Model

Today is one of the MOST IMPORTANT Salesforce Admin topics.

A user may have access to an object, but:

- ☐ Can they see ALL records?
- ☐ Can they edit ALL records?
- ☐ Can they share records?

Salesforce Security answers these questions.

☐ Goal of Day 4

By the end of today you should be able to explain:

"What can a user do?"

and

"Which records can a user see?"

A useful principle:

- Profiles and Permission Sets determine what a user can do.
 - Roles, OWD, and Sharing Rules determine which records a user can see.
-

☐ Trailhead Modules

Complete:

1. Data Security

2. Control Access to Objects

3. Control Access to Fields

4. Control Access to Records

5. Role Hierarchy

6. Sharing Rules

☐ Videos (Verified Working Links)

Video 1 (Mandatory)

Ep 8 – Managing Data Access in Salesforce | Profiles | Permission Sets | Role | FLS

https://www.youtube.com/watch?v=iWbVm_o9Z0Q

Focus:

- Profiles
- Permission Sets
- Roles
- Field Level Security (FLS)
- Object Access

Duration:
~50 mins

Video 2 (Mandatory)

Salesforce Security and Sharing Model Demystified

https://www.youtube.com/watch?v=_pwKKkHPtBM

Focus:

- Security Model
- Record Visibility
- Sharing Architecture
- Enterprise Security Design

Duration:
~60 mins

Video 3 (Recommended)

Security Setup in Salesforce For Admin

https://www.youtube.com/watch?v=oy_-iM1JiUU

Focus:

- Security Configuration
- User Access
- Security Administration
- Practical Setup

Duration:
~30 mins

☐ Reading (20 Minutes)

Managing Data Access in Salesforce

<https://www.apexhours.com/managing-data-access-in-salesforce/>

Focus:

- What is a Profile?
- What is a Permission Set?
- Field Level Security
- Role Hierarchy
- User Access Design

This article directly supports today's videos and concepts.

☐ Practical Exercise

Assume Vishnu Institute is implementing Salesforce.

Create the following users:

- Student
- Faculty
- Placement Officer

- HOD
- Principal
- Salesforce Administrator

For each role define:

Can View?

- Student Records
- Faculty Records
- Placement Records

Can Edit?

- Attendance
- Placement Data
- Student Details

Can Delete?

- Student Records
- Placement Records

Explain your reasoning.

☐ **Enterprise Scenario**

Suppose:

Faculty A should only see CSE students.

Faculty B should only see ECE students.

HOD should see all students within the department.

Principal should see everything.

Design:

OWD

Role Hierarchy

Sharing Rules

Permission Sets

Explain why you chose each setting.

☐ **Reflection Task**

Answer:

Why should Salesforce not simply make all records visible to everyone?

Think about:

- Privacy
- Security
- Compliance
- Accidental modifications
- Organizational hierarchy

Write at least 10 points.

☐ **GitHub Submission**

Create:

/admin-day4-security-sharing/

README.md should contain:

What is OWD?

What is Role Hierarchy?

What are Sharing Rules?

Difference Between

- Profile
- Permission Set
- Role

College Security Design

Faculty Access Scenario

Reflection

Why is record-level security important?

☐ Interview Questions

1. What is OWD?
 2. What is a Role Hierarchy?
 3. What is a Sharing Rule?
 4. Difference between Profile and Role?
 5. Difference between Object Access and Record Access?
 6. What is Field Level Security?
 7. Why are Sharing Rules needed?
 8. How does Salesforce secure records?
 9. Why not make all records public?
 10. Explain the Salesforce Security Model.
 11. Difference between Profile and Permission Set?
 12. Why can a user have multiple Permission Sets but only one Profile?
-

☐ End of Day Outcome

You should understand:

- ☐ Profiles
- ☐ Permission Sets
- ☐ Role Hierarchy
- ☐ OWD
- ☐ Sharing Rules
- ☐ Field Level Security
- ☐ Record-Level Security
- ☐ Enterprise Access Control

This is one of the highest-yield Salesforce Admin interview topics and is frequently asked in Admin interviews.
