

☐ **Salesforce Summer Program – Day 18 (4–5 Hours)**

☐ **Goal for Today**

Today is the transition from:

“learning concepts”

to

“building integrated enterprise applications.”

You will now:

- consolidate everything learned
- connect frontend + backend + automation
- think like a Salesforce solution developer
- build/improve a realistic mini-project

This is the MOST important learning phase of the program.

☐ **Main Focus for Today**

☐ **Final Integrated Mini Project**

Students should continue ONE system:

- College Management System
OR
 - Recruitment Management System
OR
 - Placement Tracker
OR
 - Leave Management App
-

☐ Required Integration Areas

Your project should now integrate:

- ☐ CRM concepts
 - ☐ Objects & Relationships
 - ☐ Validation Rules
 - ☐ Formula Fields
 - ☐ Flows
 - ☐ Approval Processes
 - ☐ Apex Logic
 - ☐ Triggers
 - ☐ LWC Components
 - ☐ Component Communication
 - ☐ Reports/Analytics Ideas
 - ☐ DX + GitHub workflow
 - ☐ Basic AI/Agentforce ideas (optional)
-

☐ Videos (Properly Verified Working Links)

1 ☐ LWC Live Project – Leave Management App

<https://www.youtube.com/watch?v=SygSI0IT7fU>

Focus:

- Real project architecture
- LWC + Apex integration
- Validation logic
- Component communication
- Enterprise workflow thinking

Channel:

Force Fellow

2 ☐ Salesforce LWC Integration Project | Full Project

<https://www.youtube.com/watch?v=eJJ6nDV2Nd0>

Focus:

- API integration
- End-to-end application thinking
- Real project workflow
- Integration architecture

Channel:

Comrevo

3 Crash Course – Learn Lightning Web Components with Live Project

<https://www.youtube.com/watch?v=Dv5KuG4bK90>

Focus:

- Complete LWC workflow
- Parent-child communication
- Apex integration
- RefreshApex
- Real project construction

Channel:

Salesforce Bolt

4 Salesforce Developer LWC Tutorial – Beginner Guide

<https://www.youtube.com/watch?v=cMhWf7EwSSg>

Focus:

- End-to-end LWC understanding
- Lifecycle hooks
- Apex integration
- Enterprise frontend architecture

Channel:

Coding With The Force

CORE TASKS

Task 1 Final Architecture Design

Design your complete application architecture.

Explain:

- Objects
- Relationships
- Validation logic
- Automation
- Apex usage
- LWC screens
- Notifications
- Approval workflows

☐ Think like a Solution Architect.

Task 2 End-to-End Workflow Thinking

Choose ONE major workflow.

Example:
Student registration

Now explain:

UI →
Validation →
Flow →
Apex →
Database →
Notification →
Approval →
Dashboard update

☐ Explain each layer clearly.

Task 3 Scaling Thinking

Suppose:
100,000 users use your application.

What problems might happen?

Think about:

- performance

- security
 - debugging
 - scalability
 - duplicate data
 - slow UI
 - automation overload
-

Task 4 AI Extension Thinking

Suggest:

2 ways Agentforce/AI could improve your project.

Examples:

- AI attendance assistant
 - AI placement recommendation
 - AI FAQ assistant
 - AI approval summarizer
-

Task 5 Reflection

Answer:

- ☐ What did you learn about enterprise software systems after this Salesforce journey?
-

☐ GitHub Submission

Create:

/final-project-phase1/

README.md should include:

- System overview
- Architecture diagram
- Objects & relationships
- Validation rules
- Flow explanations
- Apex logic
- LWC screens
- Workflow explanation
- Scaling considerations

- AI enhancement ideas
 - Reflection
-

☐ Revision Questions

1. Why do enterprise systems require layered architecture?
 2. Why are frontend/backend separation important?
 3. Why are Flows and Apex both useful?
 4. Why are reusable components powerful?
 5. Why do enterprise systems require approvals?
 6. Why is debugging important?
 7. Why is data quality critical?
 8. Why do large systems require scalability thinking?
 9. How can AI improve enterprise systems?
 10. What is the difference between coding and enterprise engineering?
-

☐ ☐ Rules

- Focus on integration and architecture
 - Think like a real engineering team
 - Use real-world reasoning
 - Do NOT blindly copy project videos
 - Spend around 4–5 hours maximum
-

☐ End of Day Outcome

Students should now clearly understand:

- ☐ End-to-end Salesforce application architecture
 - ☐ Enterprise workflow integration
 - ☐ UI + backend + automation interaction
 - ☐ Real-world system thinking
 - ☐ How enterprise applications are engineered
-
