

☒ Salesforce Summer Program – Day 19 (4–5 Hours)

☐ Goal for Today

Today students move toward:

“Enterprise application completion and presentation readiness.”

This is now:

- consolidation
- refinement
- architecture thinking
- project polishing
- system integration

Today is NOT about learning many new concepts.

It is about:

“Can you explain and improve a real enterprise application?”

☐ Main Focus for Today

Final Project – Phase 2

Continue and improve your integrated Salesforce application.

Examples:

- College Management System
 - Recruitment Management App
 - Placement Tracker
 - Leave Management System
-

☐ Areas To Improve Today

Your project should now include:

- ☐ Better UI structure
 - ☐ Improved validations
 - ☐ Better automation logic
 - ☐ Cleaner workflows
 - ☐ Error handling ideas
 - ☐ Approval workflows
 - ☐ Better scalability thinking
 - ☐ Reporting/dashboard ideas
 - ☐ AI enhancement ideas
 - ☐ Better architecture explanation
-

☐ Videos (Properly Verified Working Links)

1 ☐ Salesforce Architecture Basics

<https://www.youtube.com/watch?v=Gm4Xj6Prn8M>

Focus:

- Enterprise architecture
- System design thinking
- Scalability concepts

Channel:

Salesforce Developers

2 ☐ LWC Project Tutorial – Leave Management System

<https://www.youtube.com/watch?v=SygSlOIT7fU>

Focus:

- Real-world project structure
- UI + Apex integration
- Component communication
- Enterprise workflow

Channel:
Force Fellow

3 Salesforce Integration Project Tutorial

<https://www.youtube.com/watch?v=eJJ6nDV2Nd0>

Focus:

- Integration thinking
- Real application flow
- End-to-end project structure

Channel:
Comrevo

4 GitHub Workflow for Developers

<https://www.youtube.com/watch?v=8JJ101D3knE>

Focus:

- Version control
- Collaboration
- Commit discipline
- Team workflow

Channel:
Programming with Mosh

CORE TASKS

Task 1 Final Architecture Refinement

Improve your project architecture.

Explain:

- frontend
- backend
- automation

- approval workflow
- data flow
- security
- scalability

☐ Think like a Solution Architect.

Task 2 Reporting & Analytics Thinking

Suggest:

5 dashboards/reports for your system.

Examples:

- Attendance dashboard
- Placement analytics
- Faculty workload report
- Course enrollment trends
- Approval pending report

Explain:

☐ why management needs these dashboards.

Task 3 Failure Scenario Thinking

Suppose:

- notification system fails
- duplicate records created
- approval stuck
- automation loop occurs

Explain:

☐ how would your system handle/recover?

Task 4 Presentation Preparation

Prepare:

- 5-minute project explanation
- architecture overview
- workflow explanation

- challenges faced
 - lessons learned
-

Task 5 Reflection

Answer:

- ☐ What is the biggest difference between:
 - learning isolated coding concepts and
 - designing enterprise systems?
-

☐ GitHub Submission

Create:

/final-project-phase2/

README.md should include:

- Final architecture
 - Workflow explanation
 - Approval workflows
 - Reporting/dashboard ideas
 - Failure handling ideas
 - Scalability discussion
 - Reflection
-

☐ Revision Questions

1. Why do enterprise systems require layered architecture?
2. Why are dashboards important?
3. Why should systems handle failures gracefully?
4. Why are approvals important?
5. Why is scalability important?
6. Why should developers think about maintainability?
7. Why is architecture thinking important?
8. Why are integrations important in enterprise systems?
9. Why should systems support analytics?
10. What did you learn about enterprise engineering?

☐ ☐ Rules

- Focus on architecture and integration
- Think like an engineering team
- Improve your project thoughtfully
- Do NOT blindly copy videos
- Spend around 4–5 hours maximum

☐ End of Day Outcome

Students should now clearly understand:

- ☐ Enterprise architecture thinking
 - ☐ Reporting and analytics importance
 - ☐ Failure handling and scalability
 - ☐ Project refinement and presentation
 - ☐ Real-world software engineering mindset
-
